ETHOS ARCHITECTS

HIGH SCHOOL PRESS BOX

SAND SPRINGS PUBLIC SCHOOLS

The Sand Springs High School Press Box project focused on the adaptive reuse and expansion of the existing press box to better serve Sand Springs Public Schools and its athletic programs. By doubling the existing floor plan and adding a third story to the structure, elevated 42 feet above the ground, Ethos Architects transformed the original facility into a more functional space while navigating the unique challenges of renovating and expanding an existing structure. Completed in September 2026, the 5,446-square-foot project supports the district's ongoing athletic programming while extending the life and use of the original building.
