

TIMBER WOLF EXCAVATING (TWX)

Having previously worked together on a variety of buildings, Timberwolf Excavating (TWX) partnered with Ethos on the design of their new 8,300 square foot office building in Broken Arrow, OK. TWX purchased 13 acres south of their existing location for their new headquarters and their new office building is the gateway to the complex. In addition to serving as their office, the space functions as a venue for entertaining, socializing and training as well as a showroom for the type of concrete work TWX excels at creating for others. The design was collaborative and each of the company's four executives were involved in the design of their individual offices to create their own unique spaces. Their offices are prominently located on each of the building corners which is reflective on the exterior. This provides them a level of transparency and visibility with their team working outside and inside the complex. The building highlights TWX's workmanship through the cast-in-place concrete walls, each with a different texture, throughout the facility.
