

ONE GAS EDUCATION & TRAINING

This customer experience center project was an intricate and fun project to create. The space, in an existing building downtown, needed additional exhaust, venting and other infrastructural and structural adjustments to create this use.

This showroom facility is designed for a multi-faceted approach to public education of natural gas uses and opportunities, both for individuals and organizations. There is a working test kitchen to demonstrate natural gas equipment and new equipment for individuals to try out. A demonstration kitchen for classes also doubles as a film studio for OneGas and other related entities to utilize for educational opportunities. The space includes a large open lounge area for those attending classes and demonstrations and is visible from the street level to pique interest from passers-by.
