

## TULSA CARES CLINIC

As our nonprofit clients expand their services, we are passionate about cultivating a partnership that assists them in creating new spaces that serve the community. Our collaboration with the Tulsa CARES Clinic is an example of this with their new clinic adjacent to their existing headquarters. Currently in construction, this addition was designed to create a campus feel with similar aesthetics and materials to their first facility, as well as increase their visibility along the historic Route 66. The clinic is dedicated to treating patients with Hepatitis C and houses specialized exam rooms, a community pharmacy, lab spaces, waiting room, clinical offices and spaces for client outreach. The small lot size and existence on a flood plain created unique design challenges to the project that were addressed in the design.
