

UNIVERSITY OF TULSA, OXLEY COLLEGE OF HEALTH SCIENCES

The University of Tulsa needed several programs including nursing, kinesiology and rehabilitative sciences, communication sciences and disorders, behavioral health, athletic training, and exercise and sports science to be housed together for optimal functioning. Ethos worked closely with historic preservation experts to renovate five floors of the old downtown Blue Cross Blue Shield Building to ensure owners can eventually register this building with the National Historic Society. The remodeled space includes exam rooms, clinic spaces, counseling rooms, specialty classrooms, simulation labs with observation rooms, training facilities, a student lounge, and offices. TU programs are thriving in the symbiotic proximity of the new space.
