

BOK INNOVATION & COLLABORATION CAFÉ

The Bank of Oklahoma Innovation and Collaboration Café was designed with teamwork in mind. The facility employs over 800 people 24 hours a day and this area was designed as a centralized break room, including much needed training and collaboration space. The space can be opened up to hold large scale meetings for entire shifts to participate together. The café features a large kitchen area, flexible table and banquette seating, a lounge area for remote working or small informal meetings, an outdoor patio, and a convenience market. The adjacent training room uses flexible furniture to allow for multiple uses and configurations with the visual connection and adjacency to the café for break out space. Additionally, the glass partition walls of the training room are moveable so that the entire room can open to the café. The bank's signature red color was infused throughout the space in tasteful accents.
