OSU BOONE PICKENS HUMAN PERFORMANCE INNOVATION COMPLEX

The OSU Boone Pickens Human Performance Innovation Complex is a first-of-its-kind research and education facility focused on advancing human performance and nutrition science. Developed in collaboration with Populous, the 85,000 SF facility will support the Human Performance and Nutrition Research Institute, the School of Kinesiology, Applied Health, and Recreation, and the Department of Nutritional Sciences.

Ethos is serving as the local design partner on the project. Our team is providing project management, programming, design, and furniture selection to support the development of a highly specialized research and learning environment. The facility is designed to translate insights from athletic performance, sports medicine, and academic research into real-world health applications, bringing together interdisciplinary programs and industry partnerships to improve health outcomes across Oklahoma.
